## **DETAILED ACTION**

### **New grounds of rejection**

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over the applicant's admitted prior art (AAPA) of this application in combination with Shokouhi et al. (US pat 6,249,458).

**With respect to claims 1-10, AAPA in combination with Shokouhi et al. teach the invention as claimed. See the nonfinal rejection dated 06/13/05 and the final rejection dated 10/24/06.**

Further with respect to claim 1 as presently amended, AAPA further teaches forming the highly doped N-type (N+) region and highly doped P-type (P+) region a N-well region or a deep N-well region 112m, 112a, 114a, 114n that is formed in a P-type substrate 101. AAPA further teaches the N well region or deep N-well region is not directly connected to a voltage that is the deep N-well region is floating.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***
